

NUCLEAR WASTE WORTH \$30 TRILLION?

That's right, nuclear waste is now worth about half the annual global economy. How did this happen? Advanced new reactors can now 'eat' nuclear waste and produce energy. Rather than vain attempts to store waste for 100 thousand years, nuclear 'waste' is now an incredible resource that could solve climate change. Today's nuclear waste could power the world for the next 500 years!*

NUCLEAR WASTE: IT'S NOT THE PROBLEM, IT'S THE SOLUTION!
