Roadmap Integration Team Presentation

Evaluation Summaries

**Quarterly Meeting: Washington, D.C.
April 9-11, 2002**

Roadmap Integration Team Presentation

Outline

- 1. Understanding concept evaluations**
- 2. Review evaluation data for concepts**
- 3. Explore a few selected sensitivities**
- 4. Walkdown through the concepts**

Understanding Concept Evaluations

Understanding Concept Evaluations

- 1. Criteria scoring**
- 2. Rolling up criteria into goals**
- 3. Rolling up goals into goal areas**

It is important to remember that selections may consider goal areas, goals, or even individual criteria—all can be useful.

Criteria Scoring Example

- Evaluation Metric for Criteria 22: Overnight Cost
- Low-Mode-High values for distributions
- 75%ile score evaluated numerically by software

Rolling up Criteria into Goals

- **Weighting Factors** (found in Appendix 5 of FSR)
- **Special cases: Calculated criteria/goals**
 - EC-1 (Average Cost) is a function of
 - Criterion 22 (Overnight Cost),
 - Criterion 23 (Production Cost), and
 - Criterion 24 (Construction Duration)
 - EC-2 (Capital at Risk) is a function of Criteria 22 & 24
 - SU-1 (Fuel Utilization) and SU-2 (Waste Minimization) are functions of about 5 input values for each concept

Rolling up Goals into Goal Areas

- *All goals weighted equally into the goal area evaluation*
- *SR: 3 goals*
- *SU and EC: 2 goals each*
- *NT: A new goal area with 1 goal (formerly SU-3)*

- *The five page handout summarizes all rollups, from criteria up through goal areas, for all concepts.*

- *Special information, such as the probability distribution for a goal or a goal area, can be found in the concept evaluation spreadsheets (19 files on the participant website).*

Grouping of Scores by Strength

- **Top Ranking**
 - The top 8 scores, sometimes more or less than 8 due to ties
- **Good**
 - Scores close to the top 8, down to a natural breakpoint, if possible to determine one, or else down to Neutral score
- **Neutral**
 - Scores within ± 0.20 of the ALWR baseline
- **Weak**
 - Scores less than neutral

* See next slide for explanation of 50/50 and 67/33 weighting of EC-1 and EC-2

Results of Sensitivity Studies

- 'Investment weighting' of EC-1 (67%) and EC-2 (33%):
 - Large SCWRs (W4, W5) rise from Good to Best
 - Small Na metal Pyro (L2) and Pb/Bi Battery (L6) fall from Best to Good
 - Separation of NT out of SU:
 - Na MOX Aq (L1) and Pb/Bi Battery (L6) swap, but stay in Best
 - MSR (N1) rises from Good to Best
 - VCR (N2) falls from Best to Good
- ...these were caused by very small changes in scores

Additional Considerations: Missions

- 'Missions' was an idea discussed at the GIF London meeting
- Its purpose is to assure that the 6-8 concepts will adequately address a variety of important future needs, especially those for alternative energy products and fuel cycles
- Four major missions currently identify:
 - Large Grid Electricity Producer (E1)
 - Small Grid Electricity Producer (E2)
 - Hydrogen/High Temperature (H)
 - Actinide Management (AM)
 - Waste burndown
 - Fissile creation
