The International Energy Agency

The IEA, which was established in November 1974, has over the years gained recognition as one of the world's most authoritative sources for energy statistics. Its all-encompassing annual studies of oil, natural gas, coal, electricity and renewables are indispensable tools for energy policy makers, companies involved in the energy field and scholars.

In 1997 the IEA produced a handy, pocket-sized summary of key energy data. This new edition responds to the enormously positive reaction to the books since then. **Key World Energy Statistics from the IEA** contains timely, clearly-presented data on the supply, transformation and consumption of all major energy sources. The interested businessman, journalist or student will have at his or her fingertips the annual Canadian production of coal, the electricity consumption in Thailand, the price of diesel oil in Spain and thousands of other useful energy facts.

Gathering and analysing statistics is one of the important IEA functions. But the Agency – an autonomous body within the Organisation for Economic Co-operation and Development – also:

- administers a plan to guard member countries against the risk of a major disruption of oil supplies;
- coordinates national efforts to conserve energy and develop alternative energy sources, as well as to limit pollution and energy-related climate change; and
- disseminates information on the world energy market and seeks to promote stable international trade in energy.

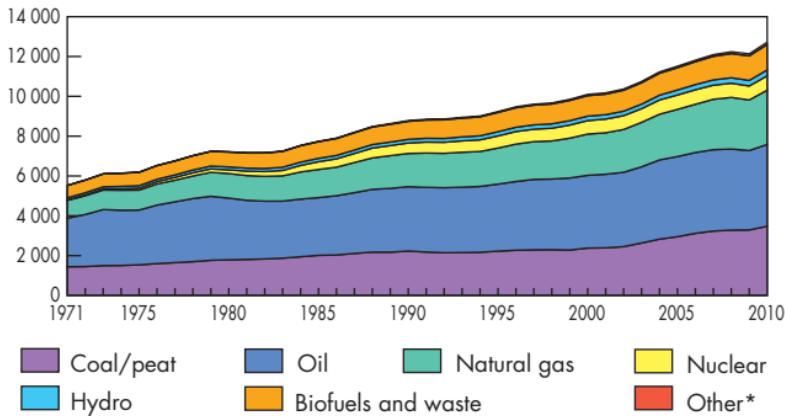

TABLE OF CONTENTS

| | |
|--------------------|----|
| SUPPLY | 1 |
| TRANSFORMATION | 2 |
| CONSUMPTION | 3 |
| ENERGY BALANCES | 4 |
| PRICES | 5 |
| EMISSIONS | 6 |
| OUTLOOK | 7 |
| ENERGY INDICATORS | 8 |
| CONVERSION FACTORS | 9 |
| GLOSSARY | 10 |

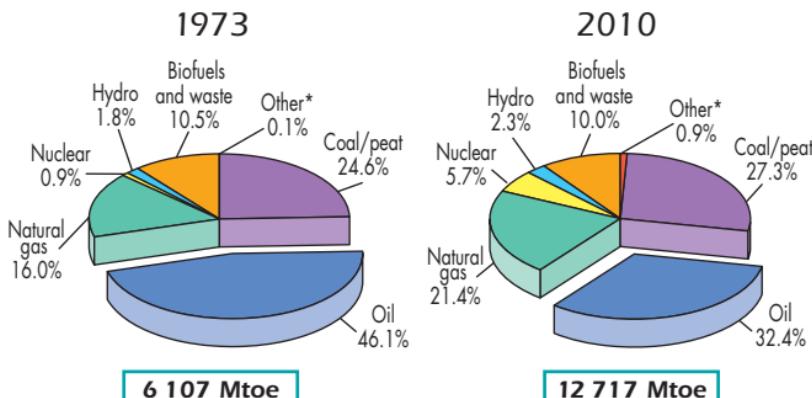

TOTAL PRIMARY ENERGY SUPPLY

World

World total primary energy supply from 1971 to 2010
by fuel (Mtoe)

1973 and 2010 fuel shares of TPES

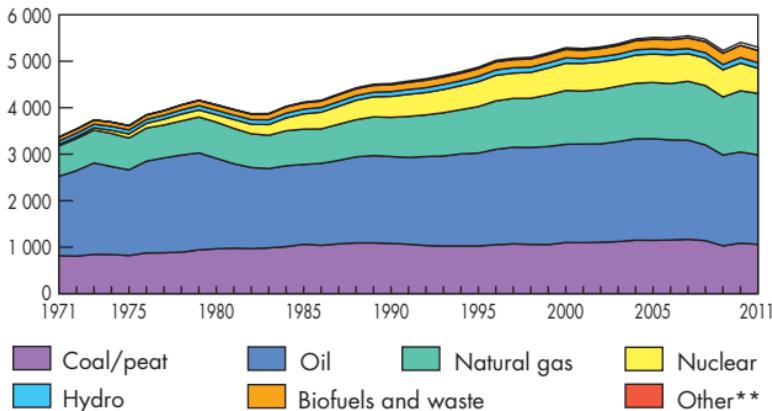

*Other includes geothermal, solar, wind, heat, etc.

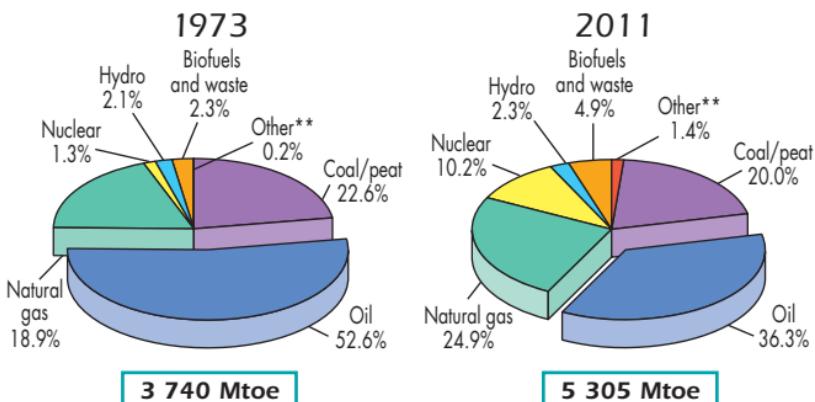

BY FUEL

OECD

OECD total primary energy supply* from 1971 to 2011
by fuel (Mtoe)

1973 and 2011 fuel shares of TPES*

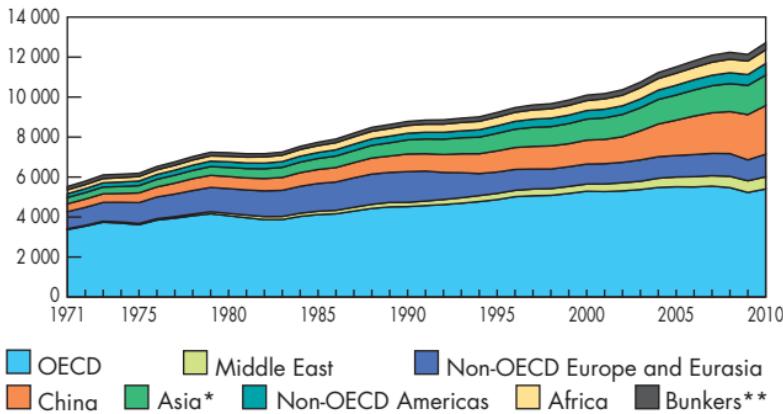

*Excludes electricity trade.

**Other includes geothermal, solar, wind, heat, etc.

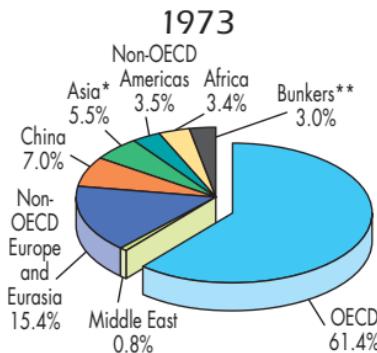

TOTAL PRIMARY ENERGY SUPPLY

World

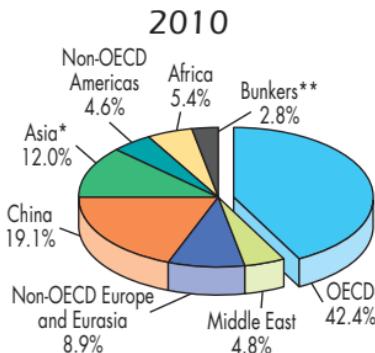

World total primary energy supply from 1971 to 2010
by region (Mtoe)

1973 and 2010 regional shares of TPES

6 107 Mtoe

12 717 Mtoe

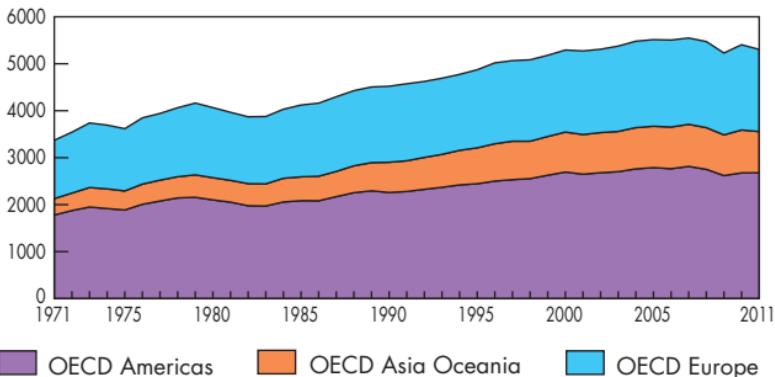

*Asia excludes China.

**Includes international aviation and international marine bunkers.

BY REGION

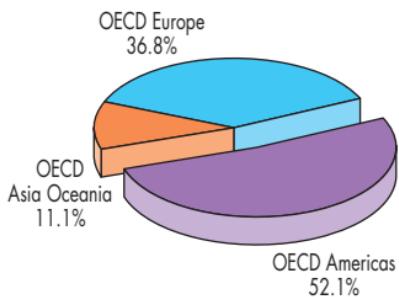

OECD

OECD total primary energy supply* from 1971 to 2011
by region (Mtoe)

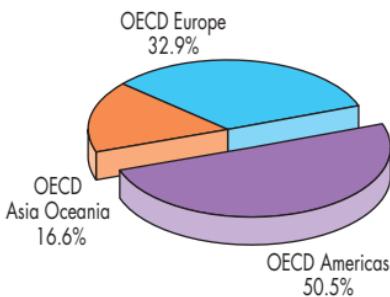

1973 and 2011 regional shares of TPES*

1973

2011

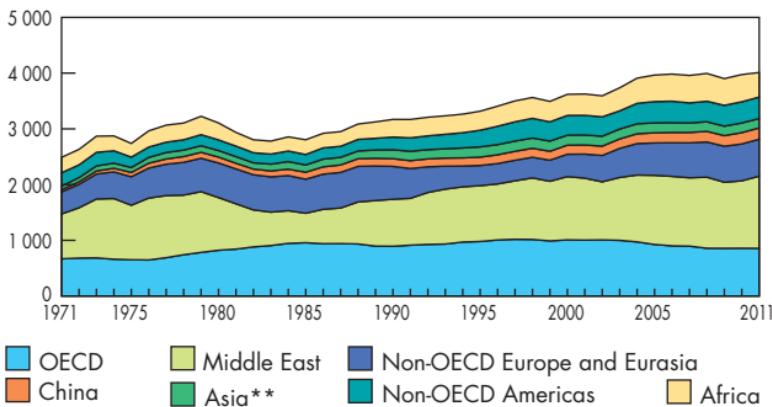

3 740 Mtoe

5 305 Mtoe

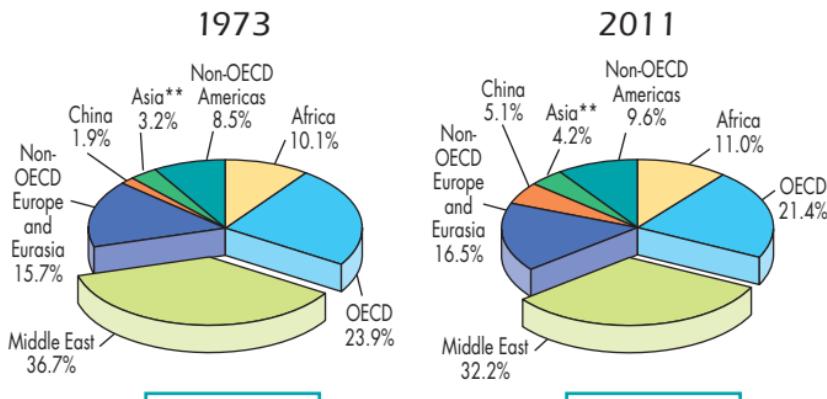

*Excludes electricity trade.

Crude Oil Production

Crude oil* production from 1971 to 2011
by region (Mt)

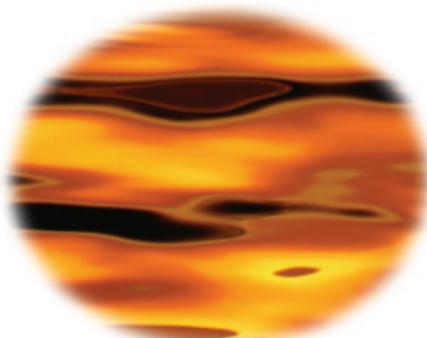

1973 and 2011 regional shares of crude oil* production

*Includes crude oil, NGL, feedstocks, additives and other hydrocarbons.

**Asia excludes China.

Producers, net exporters and net importers of crude oil*

| Producers | Mt | % of world total |
|------------------------|--------------|------------------|
| Saudi Arabia | 517 | 12.9 |
| Russian Federation | 510 | 12.7 |
| United States | 346 | 8.6 |
| Islamic Rep. of Iran | 215 | 5.4 |
| People's Rep. of China | 203 | 5.1 |
| Canada | 169 | 4.2 |
| United Arab Emirates | 149 | 3.7 |
| Venezuela | 148 | 3.7 |
| Mexico | 144 | 3.6 |
| Nigeria | 139 | 3.5 |
| Rest of the world | 1 471 | 36.6 |
| World | 4 011 | 100.0 |

2011 data

| Net exporters | Mt |
|----------------------|--------------|
| Saudi Arabia | 333 |
| Russian Federation | 246 |
| Nigeria | 129 |
| Islamic Rep. of Iran | 126 |
| United Arab Emirates | 105 |
| Iraq | 94 |
| Venezuela | 87 |
| Angola | 84 |
| Norway | 78 |
| Mexico | 71 |
| Others | 609 |
| Total | 1 962 |

2010 data

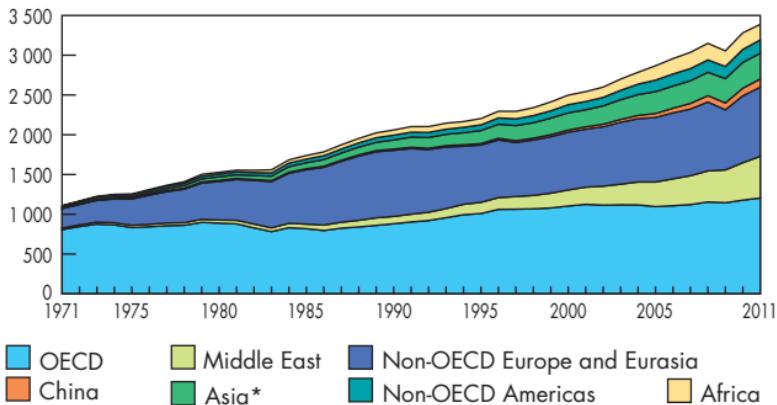

| Net importers | Mt |
|------------------------|--------------|
| United States | 513 |
| People's Rep. of China | 235 |
| Japan | 181 |
| India | 164 |
| Korea | 119 |
| Germany | 93 |
| Italy | 84 |
| France | 64 |
| Netherlands | 60 |
| Singapore | 57 |
| Others | 483 |
| Total | 2 053 |

2010 data

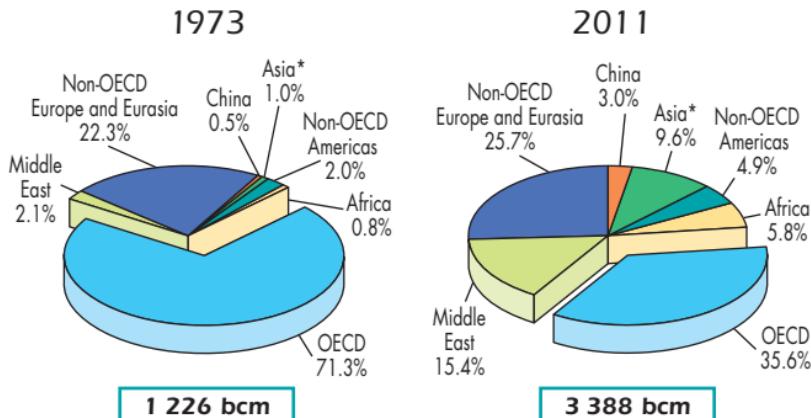

*Includes crude oil, NGL, feedstocks, additives and other hydrocarbons.

Natural Gas Production

Natural gas production from 1971 to 2011 by region
(billion cubic metres)

1973 and 2011 regional shares of natural gas production

*Asia excludes China.

Producers, net exporters and net importers* of natural gas

| Producers | bcm | % of world total |
|------------------------|--------------|------------------|
| Russian Federation | 677 | 20.0 |
| United States | 651 | 19.2 |
| Canada | 160 | 4.7 |
| Qatar | 151 | 4.5 |
| Islamic Rep. of Iran | 149 | 4.4 |
| Norway | 106 | 3.1 |
| People's Rep. of China | 103 | 3.0 |
| Saudi Arabia | 92 | 2.7 |
| Indonesia | 92 | 2.7 |
| Netherlands | 81 | 2.4 |
| Rest of the world | 1 126 | 33.3 |
| World | 3 388 | 100.0 |

2011 data

| Net exporters | bcm |
|--------------------|------------|
| Russian Federation | 196 |
| Qatar | 119 |
| Norway | 99 |
| Canada | 63 |
| Algeria | 49 |
| Indonesia | 46 |
| Netherlands | 33 |
| Turkmenistan | 29 |
| Nigeria | 26 |
| Malaysia | 22 |
| Others | 152 |
| Total | 834 |

2011 data

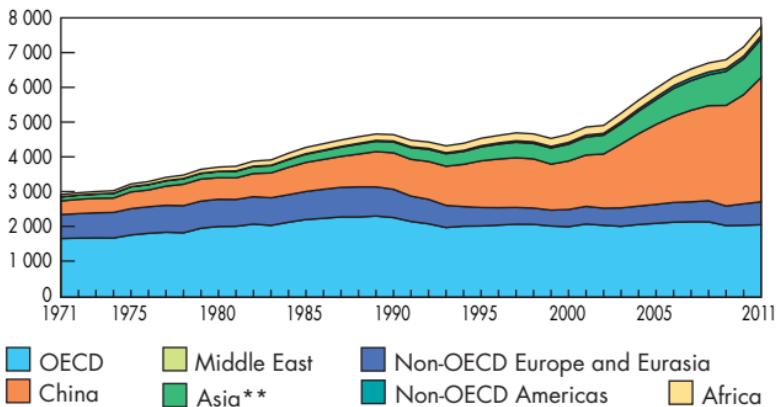

| Net importers | bcm |
|----------------|------------|
| Japan | 116 |
| Italy | 70 |
| Germany | 68 |
| United States | 55 |
| Korea | 47 |
| Ukraine | 44 |
| Turkey | 43 |
| France | 41 |
| United Kingdom | 37 |
| Spain | 34 |
| Others | 279 |
| Total | 834 |

2011 data

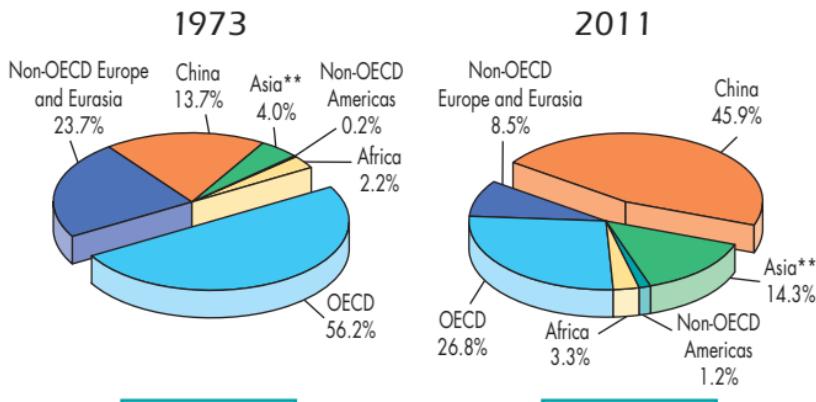

*Net exports and net imports include pipeline gas and LNG.

Coal Production

Coal* production from 1971 to 2011
by region (Mt)

1973 and 2011 regional shares of coal* production

3 041 Mt

7 783 Mt

*Includes steam coal, coking coal, lignite and recovered coal.

**Asia excludes China.

Producers, net exporters and net importers of coal*

| Producers | Mt | % of world total |
|------------------------|--------------|------------------|
| People's Rep. of China | 3 576 | 45.9 |
| United States | 1 004 | 12.9 |
| India | 586 | 7.5 |
| Australia | 414 | 5.3 |
| Indonesia | 376 | 4.8 |
| Russian Federation | 334 | 4.3 |
| South Africa | 253 | 3.3 |
| Germany | 189 | 2.4 |
| Poland | 139 | 1.8 |
| Kazakhstan | 117 | 1.5 |
| Rest of the world | 795 | 10.3 |
| World | 7 783 | 100.0 |

2011 data

| Net exporters | Mt |
|--------------------|--------------|
| Indonesia | 309 |
| Australia | 285 |
| Russian Federation | 99 |
| United States | 85 |
| Colombia | 76 |
| South Africa | 70 |
| Kazakhstan | 34 |
| Canada | 24 |
| Vietnam | 23 |
| Mongolia | 22 |
| Others | 14 |
| Total | 1 041 |

2011 data

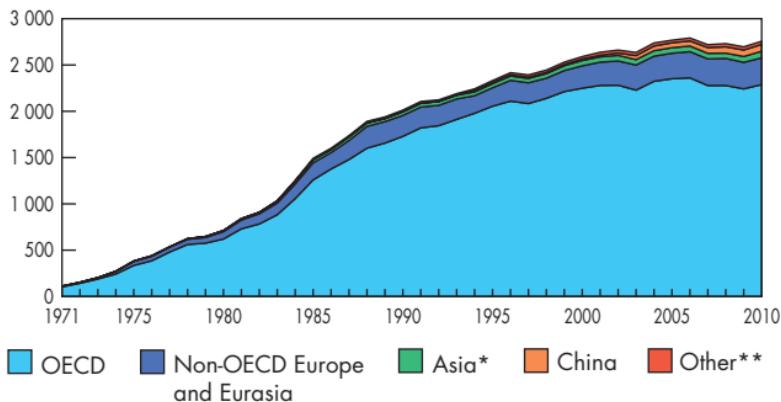

| Net importers | Mt |
|------------------------|--------------|
| People's Rep. of China | 177 |
| Japan | 175 |
| Korea | 129 |
| India | 101 |
| Chinese Taipei | 66 |
| Germany | 41 |
| United Kingdom | 32 |
| Turkey | 24 |
| Italy | 23 |
| Malaysia | 21 |
| Others | 213 |
| Total | 1 002 |

2011 data

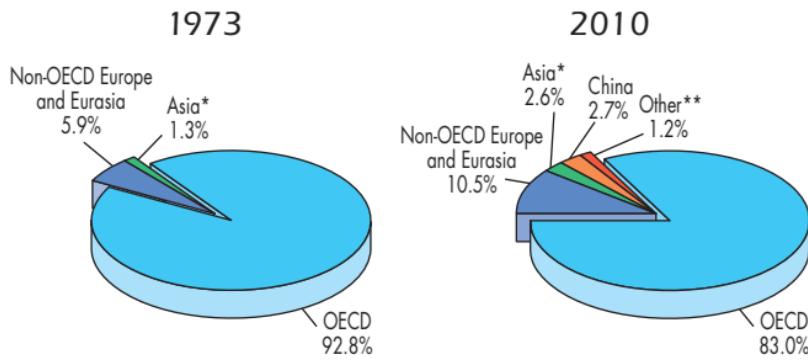

*Includes steam coal, coking coal, lignite and recovered coal.

Nuclear Production

Nuclear production from 1971 to 2010
by region (TWh)

1973 and 2010 regional shares of nuclear production

*Asia excludes China.

**Other includes Africa, Non-OECD Americas and the Middle East.

Producers of nuclear electricity

1

| Producers | TWh | % of world total |
|------------------------|--------------|------------------|
| United States | 839 | 30.4 |
| France | 429 | 15.6 |
| Japan | 288 | 10.4 |
| Russian Federation | 170 | 6.2 |
| Korea | 149 | 5.4 |
| Germany | 141 | 5.1 |
| Canada | 91 | 3.3 |
| Ukraine | 89 | 3.2 |
| People's Rep. of China | 74 | 2.7 |
| United Kingdom | 62 | 2.2 |
| Rest of the world | 424 | 15.5 |
| World | 2 756 | 100.0 |

2010 data

*Excludes countries with no nuclear production.

| Installed capacity | GW |
|--------------------|------------|
| United States | 101 |
| France | 63 |
| Japan | 49 |
| Russian Federation | 24 |
| Germany | 20 |
| Korea | 18 |
| Ukraine | 14 |
| Canada | 13 |
| United Kingdom | 11 |
| Sweden | 9 |
| Rest of the world | 53 |
| World | 375 |

2010 data

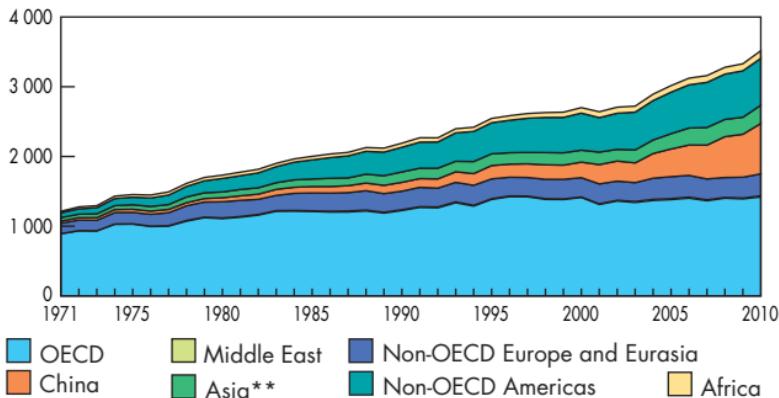

Sources: IEA,
Commissariat à l'Énergie
Atomique et aux Energies
Alternatives (France).

| Country (top-ten producers) | % of nuclear in total domestic electricity generation |
|-----------------------------|---|
| France | 75.9 |
| Ukraine | 47.3 |
| Korea | 29.9 |
| Japan | 26.0 |
| Germany | 22.6 |
| United States | 19.3 |
| Russian Federation | 16.5 |
| United Kingdom | 16.4 |
| Canada | 14.9 |
| People's Rep. of China | 1.8 |
| Rest of the world* | 12.2 |
| World | 12.9 |

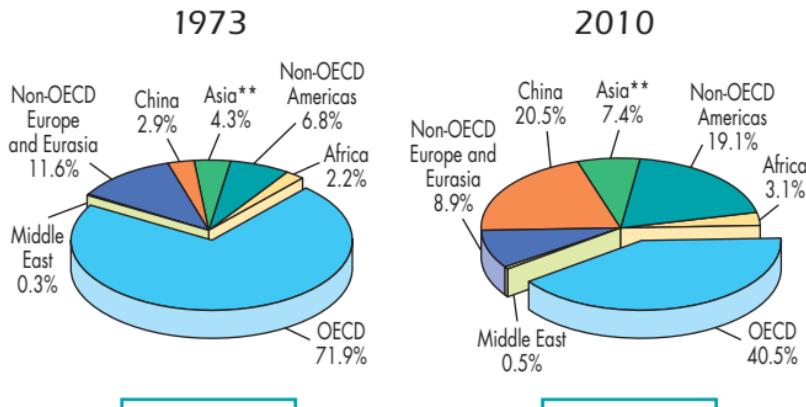

2010 data

Hydro Production

Hydro* production from 1971 to 2010
by region (TWh)

1973 and 2010 regional shares of hydro* production

1 294 TWh

3 516 TWh

*Includes pumped storage.
**Asia excludes China.

Producers of hydro* electricity

| Producers | TWh | % of world total |
|------------------------|--------------|------------------|
| People's Rep. of China | 722 | 20.5 |
| Brazil | 403 | 11.5 |
| Canada | 352 | 10.0 |
| United States | 286 | 8.1 |
| Russian Federation | 168 | 4.8 |
| Norway | 118 | 3.4 |
| India | 114 | 3.3 |
| Japan | 91 | 2.6 |
| Venezuela | 77 | 2.2 |
| France | 67 | 1.9 |
| Rest of the world | 1 118 | 31.7 |
| World | 3 516 | 100.0 |

2010 data

*Includes pumped storage.

**Excludes countries with no hydro production.

| Installed capacity | GW |

| Others | 83 |
| Total | 242 |

*Gross production minus production from pumped storage plants. 2010 data

TOTAL FINAL CONSUMPTION

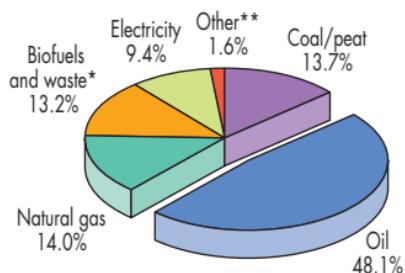

World

World total final consumption from 1971 to 2010
by fuel (Mtoe)

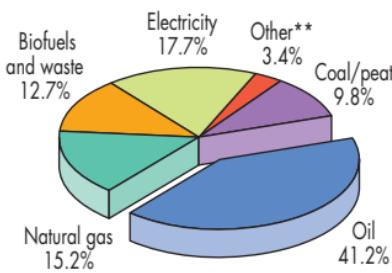

1973 and 2010 fuel shares of total final consumption

1973

4 672 Mtoe

2010

8 677 Mtoe

*Data prior to 1994 for biofuels and waste final consumption have been estimated.

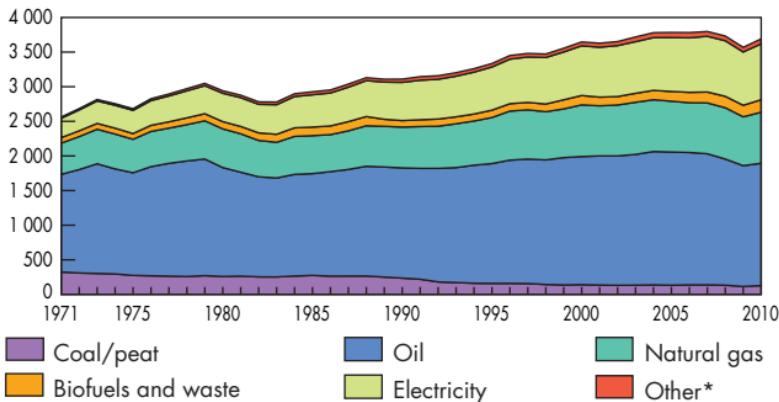

**Other includes geothermal, solar, wind, heat, etc.

BY FUEL

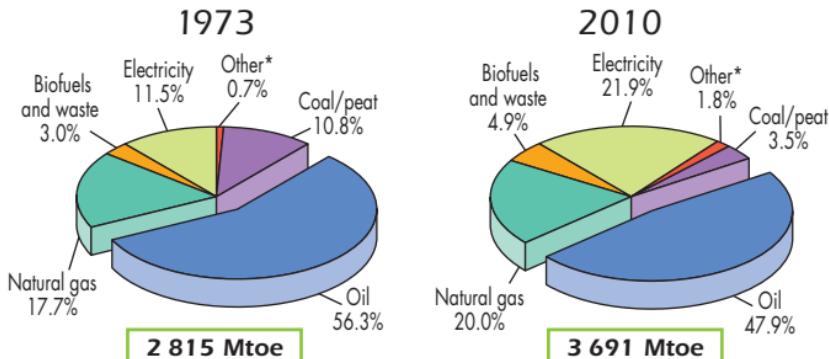

OECD

3

OECD total final consumption from 1971 to 2010
by fuel (Mtoe)

1973 and 2010 fuel shares of total final consumption

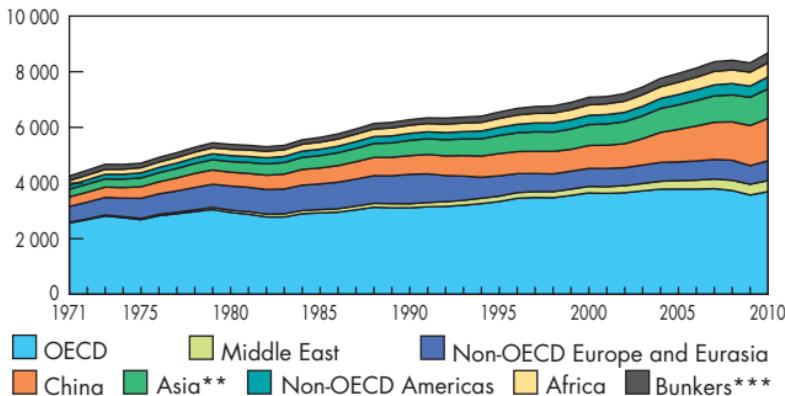

*Other includes geothermal, solar, wind, heat, etc.

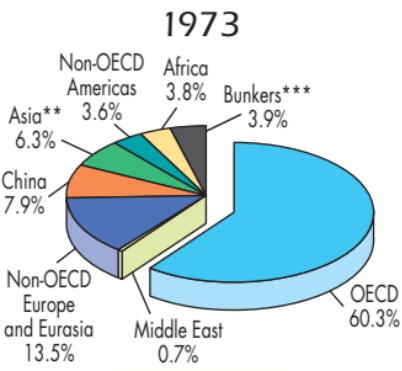

TOTAL FINAL CONSUMPTION

World

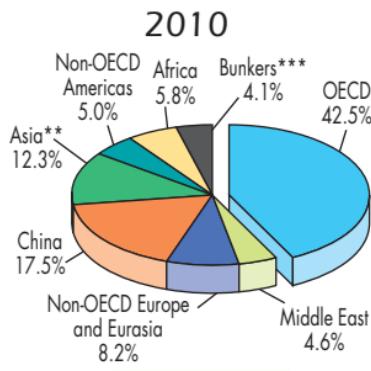

World total final consumption* from 1971 to 2010
by region (Mtoe)

1973 and 2010 regional shares of total final consumption*

4 672 Mtoe

8 677 Mtoe

*Data prior to 1994 for biofuels and waste final consumption have been estimated.

**Asia excludes China.

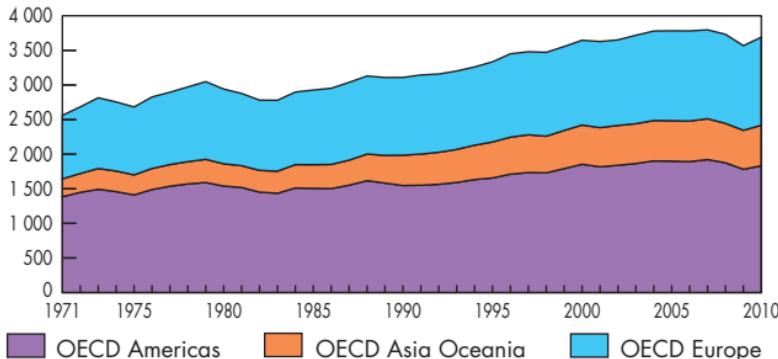

***Includes international aviation and international marine bunkers.

BY REGION

OECD

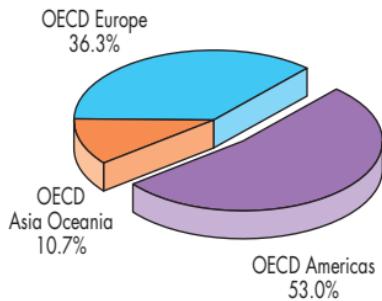

3

OECD total final consumption from 1971 to 2010
by region (Mtoe)

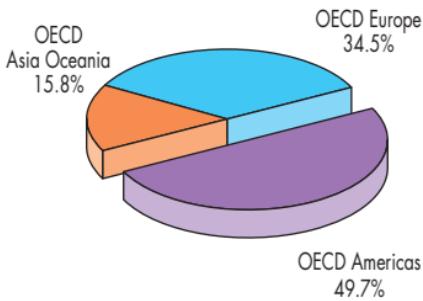

1973 and 2010 regional shares of total final consumption

1973

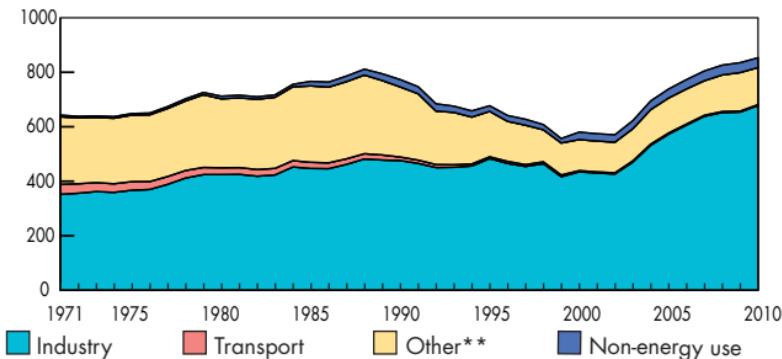

2010

TOTAL FINAL CONSUMPTION

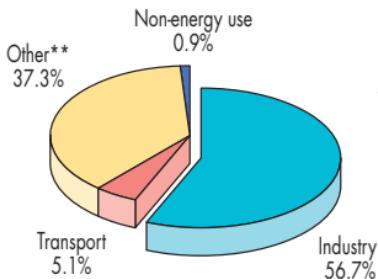

Coal*

Total final consumption from 1971 to 2010
by sector (Mtoe)

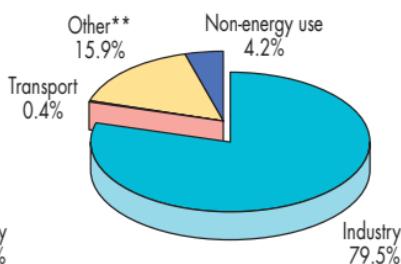

1973 and 2010 shares of world coal* consumption

1973

640 Mtoe

2010

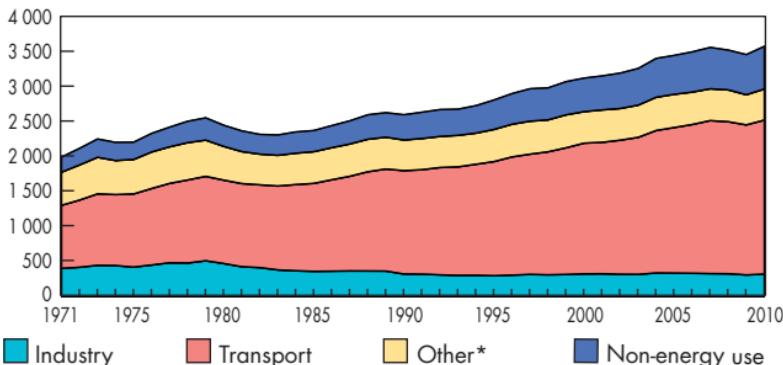

853 Mtoe

*Coal refers to coal/peat. **Includes agriculture, commercial and public services, residential, and non-specified other.

BY SECTOR

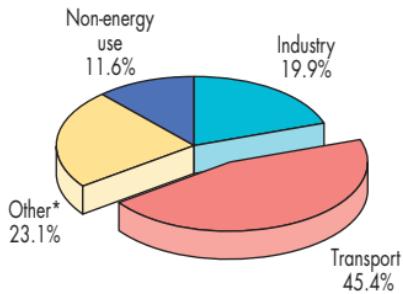

Oil

Total final consumption from 1971 to 2010
by sector (Mtoe)

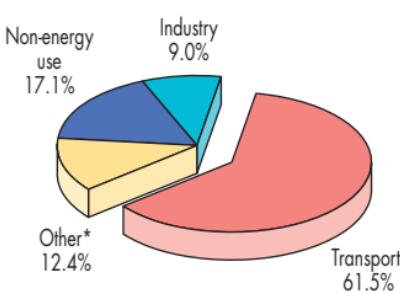

1973 and 2010 shares of world oil consumption

1973

2010

2 250 Mtoe

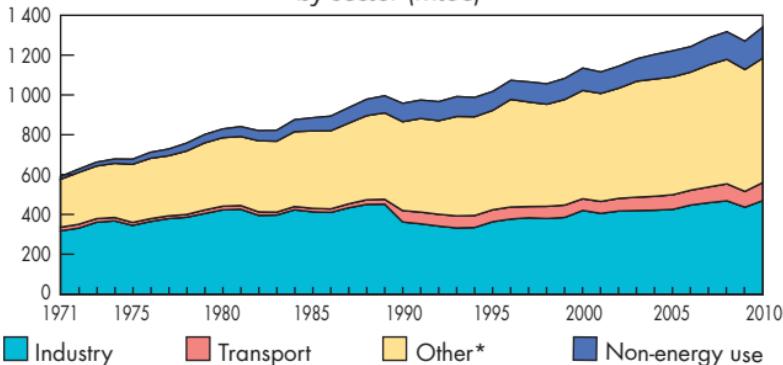

3 570 Mtoe

*Includes agriculture, commercial and public services, residential, and non-specified other.

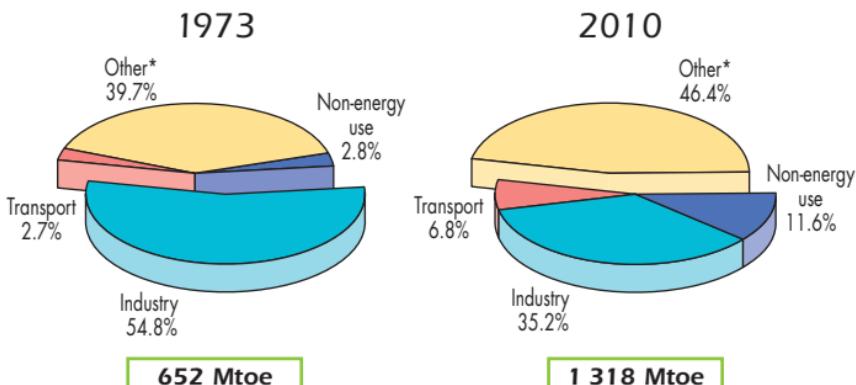

TOTAL FINAL CONSUMPTION

Natural gas

Total final consumption from 1971 to 2010
by sector (Mtoe)

1973 and 2010 shares of world natural gas consumption

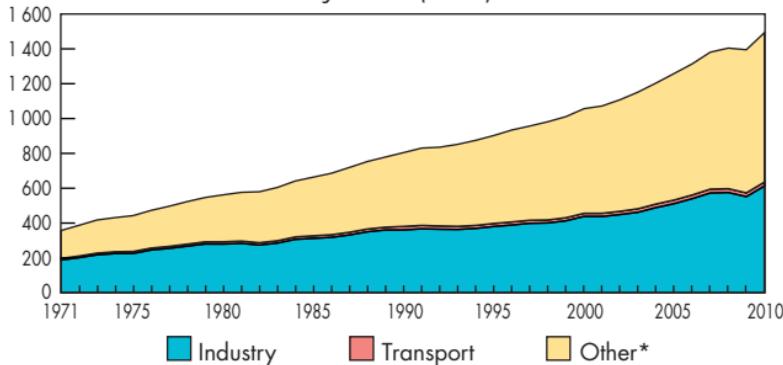

*Includes agriculture, commercial and public services, residential, and non-specified other.

BY SECTOR

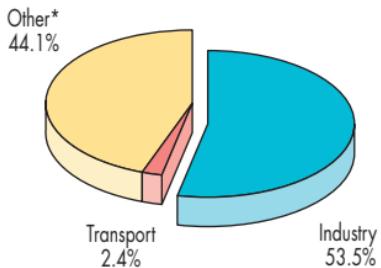

Electricity

Total final consumption from 1971 to 2010
by sector (Mtoe)

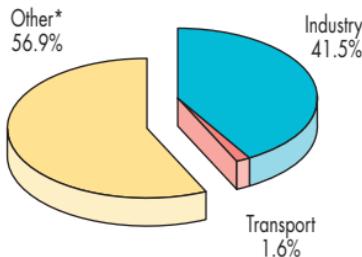

1973 and 2010 shares of world electricity consumption

1973

439 Mtoe

2010

1 536 Mtoe

*Includes agriculture, commercial and public services, residential, and non-specified other.

CO₂ Emissions by Fuel

World* CO₂ emissions** from 1971 to 2010
by fuel (Mt of CO₂)

1973 and 2010 fuel shares of CO₂ emissions**

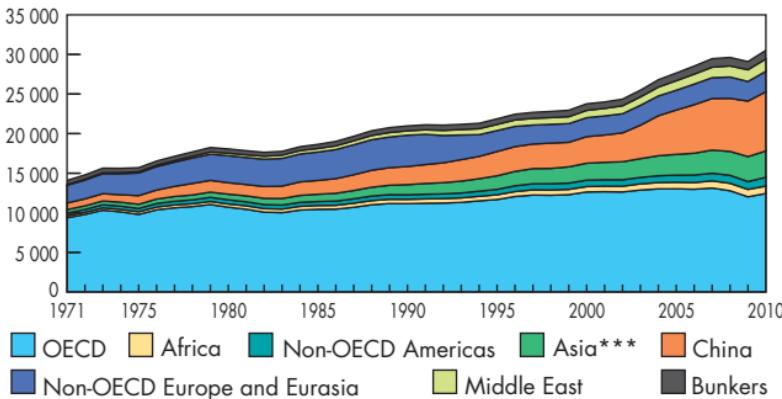

*World includes international aviation and international marine bunkers.

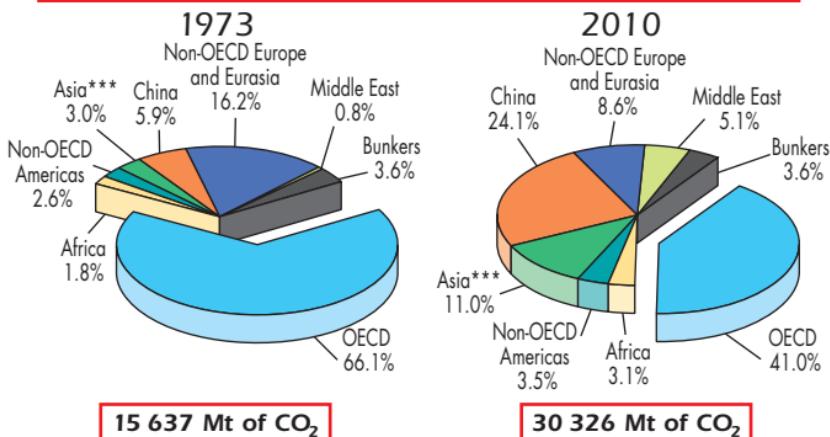

**Calculated using the IEA's energy balances and the Revised 1996 IPCC Guidelines.
CO₂ emissions are from fuel combustion only. ***Other includes industrial waste
and non-renewable municipal waste.

CO₂ Emissions by Region

World* CO₂ emissions** from 1971 to 2010
by region (Mt of CO₂)

1973 and 2010 regional shares of CO₂ emissions**

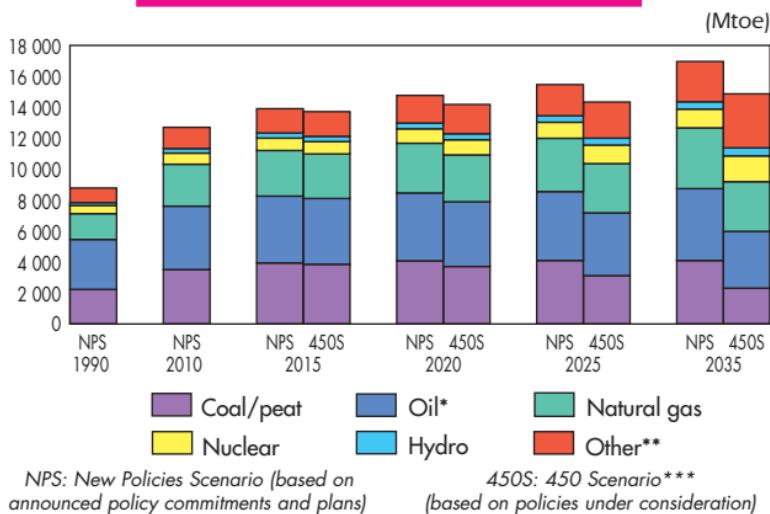

6

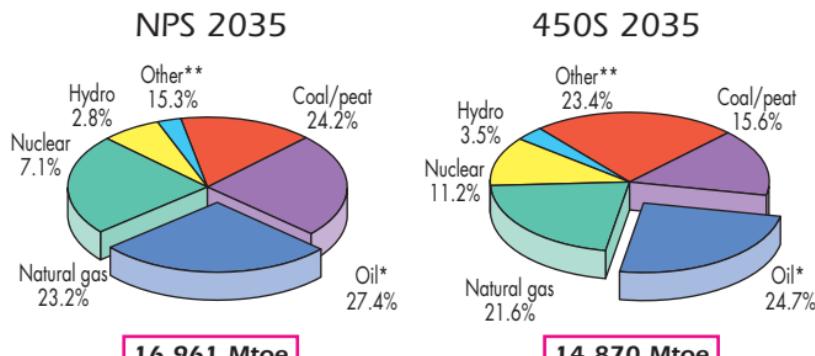

*World includes international aviation and international marine bunkers, which are shown together as Bunkers. **Calculated using the IEA's energy balances and the Revised 1996 IPCC Guidelines. CO₂ emissions are from fuel combustion only. ***Asia excludes China.

OUTLOOK FOR WORLD TPES

TPES Outlook by Fuel

Fuel shares of TPES in 2035 for New Policies Scenario and 450 Scenario

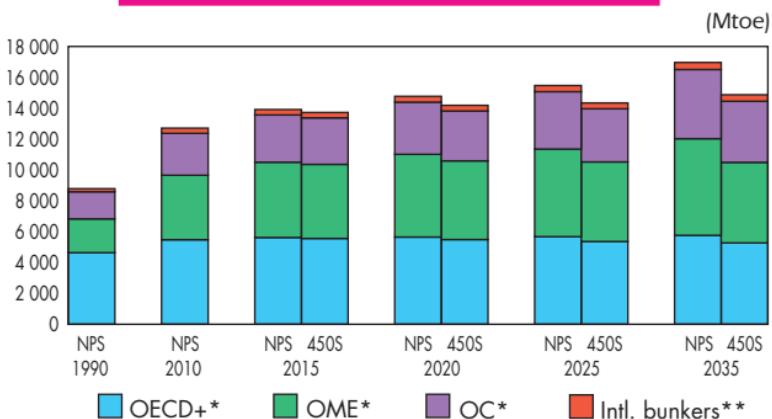

*Includes international aviation and international marine bunkers.

**Other includes biofuels and waste, geothermal, solar, wind, tide, etc.

***Based on a plausible post-2012 climate-policy framework to stabilise the concentration of global greenhouse gases at 450 ppm CO₂-equivalent.

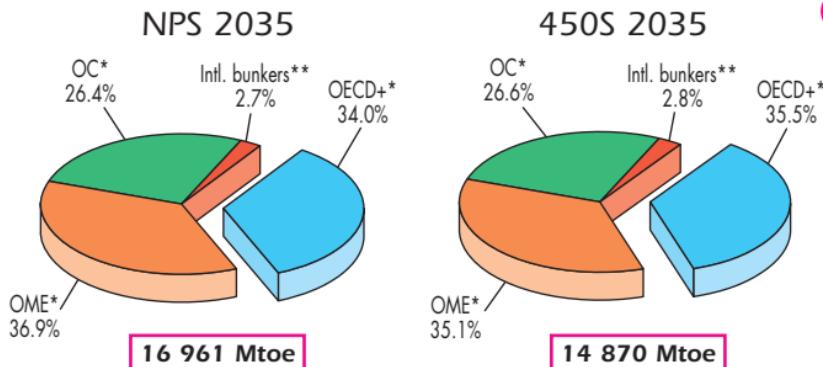

TO 2035

TPES Outlook by Region

NPS: New Policies Scenario (based on announced policy commitments and plans)

450S: 450 Scenario***
(based on policies under consideration)

Regional shares of TPES in 2035 for New Policies Scenario and 450 Scenario

*Please refer to the geographical coverage section for definitions of the regions.

**Includes international aviation and international marine bunkers.

***Based on a plausible post-2012 climate-policy framework to stabilise the concentration of global greenhouse gases at 450 ppm CO₂-equivalent.

Selected Indicators for 2010

| Region/ Country/ Economy | Popu- lation (million) | GDP (billion 2005 USD) | GDP (PPP) (billion 2005 USD) | Energy prod. (Mtoe) | Net imports (Mtoe) | TPES (Mtoe) | Elec. cons. ^[a] (TWh) | CO ₂ emissions ^[b] (Mt of CO ₂) |

| Indonesia | 40 600 |
| Netherlands | 33 339 |

*for the top-ten producers in 2011.

Note: to calculate the net calorific value,
the gross calorific value is multiplied by 0.9.

Conventions for electricity

Figures for electricity production, trade, and final consumption are calculated using the energy content of the electricity (i.e. at a rate of 1 TWh = 0.086 Mtoe). Hydro-electricity production (excluding pumped storage) and electricity produced by other non-thermal means (wind, tide/wave/ocean, photovoltaic, etc.) are accounted for similarly using 1 TWh = 0.086 Mtoe. However, the primary energy equivalent of nuclear electricity is calculated from the gross generation by assuming a 33% conversion efficiency, i.e. 1 TWh = (0.086 ÷ 0.33) Mtoe. In the case of electricity produced from geothermal heat, if the actual geothermal efficiency is not known, then the primary equivalent is calculated assuming an efficiency of 10%, so 1 TWh = (0.086 ÷ 0.1) Mtoe.

GLOSSARY

| | |
|---------------------------|---|
| Coal/peat | <i>Coal/peat</i> includes all coal, both primary (including hard coal and lignite) and derived fuels (including patent fuel, coke oven coke, gas coke, BKB, gas works gas, coke oven gas, blast furnace gas and other recovered gases). Peat is also included in this category. |
| Hard coal | <i>Hard coal</i> comprises anthracite, coking coal and other bituminous coal. |
| Steam coal | <i>Steam coal</i> comprises anthracite, other bituminous coal and sub-bituminous coal. |
| Crude oil | <i>Crude oil</i> comprises crude oil, natural gas liquids, refinery feedstocks and additives as well as other hydrocarbons. |
| Oil products | <i>Oil products</i> comprises refinery gas, ethane, LPG, aviation gasoline, motor gasoline, jet fuels, kerosene, gas/diesel oil, fuel oil, naphtha, white spirit, lubricants, bitumen, paraffin waxes, petroleum coke and other oil products. |
| Natural gas | <i>Natural gas</i> includes both "associated" and "non-associated" gas. |
| Nuclear | <i>Nuclear</i> shows the primary heat equivalent of the electricity produced by a nuclear power plant with an average thermal efficiency of 33%. |
| Hydro | <i>Hydro</i> shows the energy content of the electricity produced in hydro power plants. Hydro output excludes output from pumped storage plants. |
| Biofuels and waste | <i>Biofuels and waste</i> comprises solid biofuels, liquid biofuels, biogases, industrial waste and municipal waste. Biofuels are defined as any plant matter used directly as fuel or converted into fuels (e.g. charcoal) or electricity and/or heat. Included here are wood, vegetal waste (including wood waste and crops used for energy production), ethanol, animal materials/ wastes and sulphite lyes. Municipal waste comprises wastes produced by residential, commercial and public services, that are collected by local authorities for disposal in a central location for the production of heat and/or power. |
| Other | <i>Other</i> includes geothermal, solar, wind, tide/wave/ocean energy, electricity and heat. Unless the actual efficiency of the geothermal process is known, the quantity of geothermal energy entering electricity generation is inferred from the electricity production at geothermal plants assuming an average thermal efficiency of 10%. For solar, wind and tide/wave/ocean energy, the quantities entering electricity generation are equal to the electrical energy generated. Direct use of geothermal and solar heat is also included here. Electricity is accounted for at the same heat value as electricity in final consumption (i.e. 1 GWh = 0.000086 Mtoe). Heat includes heat that is produced for sale and is accounted for in the transformation sector. |

Production

Production is the production of primary energy, i.e. hard coal, lignite, peat, crude oil, NGLs, natural gas, biofuels and waste, nuclear, hydro, geothermal, solar and the heat from heat pumps that is extracted from the ambient environment. Production is calculated after removal of impurities (e.g. sulphur from natural gas).

Imports and exports

Imports and exports comprise amounts having crossed the national territorial boundaries of the country, whether or not customs clearance has taken place.

a) Oil and natural gas

Quantities of crude oil and oil products imported or exported under processing agreements (i.e. refining on account) are included. Quantities of oil in transit are excluded. Crude oil, NGL and natural gas are reported as coming from the country of origin; refinery feedstocks and oil products are reported as coming from the country of last consignment. Re-exports of oil imported for processing within bonded areas are shown as exports of product from the processing country to the final destination.

b) Coal/peat

Imports and exports comprise the amount of fuels obtained from or supplied to other countries, whether or not there is an economic or customs union between the relevant countries. Coal in transit is not included.

c) Electricity

Amounts are considered as imported or exported when they have crossed the national territorial boundaries of the country.

International marine bunkers

International marine bunkers covers those quantities delivered to ships of all flags that are engaged in international navigation. The international navigation may take place at sea, on inland lakes and waterways, and in coastal waters. Consumption by ships engaged in domestic navigation is excluded. The domestic/international split is determined on the basis of port of departure and port of arrival, and not by the flag or nationality of the ship. Consumption by fishing vessels and by military forces is also excluded.

International aviation bunkers

International aviation bunkers covers deliveries of aviation fuels to aircraft for international aviation. Fuels used by airlines for their road vehicles are excluded. The domestic/international split should be determined on the basis of departure and landing locations and not by the nationality of the airline. For many countries this incorrectly excludes fuel used by domestically owned carriers for their international departures.

| | |
|---|---|
| Stock changes | <i>Stock changes</i> reflects the difference between opening stock levels on the first day of the year and closing levels on the last day of the year of stocks on national territory held by producers, importers, energy transformation industries and large consumers. A stock build is shown as a negative number, and a stock draw as a positive number. |
| Total primary energy supply (TPES) | <i>Total primary energy supply (TPES)</i> is made up of production + imports – exports – international marine bunkers – international aviation bunkers ± stock changes. For the world total, international marine bunkers and international aviation bunkers are not subtracted from TPES. |
| Transfers | <i>Transfers</i> includes both interproduct transfers, products transferred and recycled products. |
| Statistical differences | <i>Statistical differences</i> includes the sum of the unexplained statistical differences for individual fuels, as they appear in the basic energy statistics. It also includes the statistical differences that arise because of the variety of conversion factors in the coal/peat and oil columns. |
| Electricity plants | <i>Electricity plants</i> refers to plants which are designed to produce electricity only. If one or more units of the plant is a CHP unit (and the inputs and outputs can not be distinguished on a unit basis) then the whole plant is designated as a CHP plant. Both main activity producers and autoproducer plants are included here. |
| Combined heat and power plants | <i>Combined heat and power plants</i> refers to plants which are designed to produce both heat and electricity, sometimes referred as co-generation power stations. If possible, fuel inputs and electricity/heat outputs are on a unit basis rather than on a plant basis. However, if data are not available on a unit basis, the convention for defining a CHP plant noted above is adopted. Both main activity producers and autoproducer plants are included here. |
| Heat plants | <i>Heat plants</i> refers to plants (including heat pumps and electric boilers) designed to produce heat only, which is sold to a third party under the provisions of a contract. Both main activity producers and autoproducer plants are included here. |
| Blast furnaces | <i>Blast furnaces</i> contains inputs to and outputs of fuels from blast furnaces. |
| Gas works | <i>Gas works</i> is treated similarly to electricity generation, with the quantity produced appearing as a positive figure in the coal/peat column or the natural gas column after blending with natural gas, inputs as negative entries in the coal/peat and oil products columns, and conversion losses appearing in the total column. |

| | |
|--------------------------------------|---|
| Coke ovens | <p><i>Coke ovens</i> contains losses in transformation of coal from primary to secondary fuels and from secondary to tertiary fuels (hard coal to coke and patent fuel, lignite to BKB, etc.).</p> |
| Oil refineries | <p><i>Oil refineries</i> shows the use of primary energy for the manufacture of finished oil products and the corresponding output. Thus, the total reflects transformation losses. In certain cases the data in the total column are positive numbers. This can be due to either problems in the primary refinery balance or to the fact that the IEA uses regional net calorific values for oil products.</p> |
| Petrochemical plants | <p><i>Petrochemical plants</i> covers backflows returned from the petrochemical industry. Note that backflows from oil products that are used for non-energy purposes (i.e. white spirit and lubricants) are not included here, but in non-energy use.</p> |
| Liquefaction plants | <p><i>Liquefaction plants</i> includes diverse liquefaction processes, such as coal liquefaction plants and gas-to-liquid plants.</p> |
| Other transformation | <p><i>Other transformation</i> covers non-specified transformation not shown elsewhere, such as the transformation of primary solid biofuels into charcoal.</p> |
| Energy industry own use | <p><i>Energy industry own use</i> contains the primary and secondary energy consumed by transformation industries for heating, pumping, traction and lighting purposes [ISIC 05, 06, 19 and 35, Group 091 and Classes 0892 and 0721].</p> |
| Losses | <p><i>Losses</i> includes losses in energy distribution, transmission and transport.</p> |
| Total final consumption (TFC) | <p><i>Total final consumption (TFC)</i> is the sum of consumption by the different end-use sectors. Backflows from the petrochemical industry are not included in final consumption.</p> |
| Industry | <p><i>Industry</i> consumption is specified in the following subsectors (energy used for transport by industry is not included here but reported under transport):</p> <ul style="list-style-type: none">■ <i>Iron and steel industry</i> [ISIC Group 241 and Class 2431];■ <i>Chemical and petrochemical industry</i> [ISIC Divisions 20 and 21] excluding petrochemical feedstocks;■ <i>Non-ferrous metals</i> basic industries [ISIC Group 242 and Class 2432];■ <i>Non-metallic minerals</i> such as glass, ceramic, cement, etc. [ISIC Division 23];■ <i>Transport equipment</i> [ISIC Divisions 29 and 30];■ <i>Machinery</i> comprises fabricated metal products, machinery and equipment other than transport equipment [ISIC Divisions 25 to 28]; |

- Industry (ctd.)**
- *Mining (excluding fuels) and quarrying* [ISIC Divisions 07 and 08 and Group 099];
 - *Food and tobacco* [ISIC Divisions 10 to 12];
 - *Paper, pulp and printing* [ISIC Divisions 17 and 18];
 - *Wood and wood products* (other than pulp and paper) [ISIC Division 16];
 - *Construction* [ISIC Divisions 41 to 43];
 - *Textile and leather* [ISIC Divisions 13 to 15];
 - *Non-specified* (any manufacturing industry not included above) [ISIC Divisions 22, 31 and 32].

Transport *Transport* includes all fuels used for transport [ISIC Divisions 49 to 51]. It includes transport in industry and covers domestic aviation, road, rail, pipeline transport, domestic navigation and non-specified transport. Fuel used for ocean, coastal and inland fishing (included under fishing) and military consumption (included in other non-specified) are excluded from transport. Please note that international marine and international aviation bunkers are also included here for world total.

Other *Other* covers residential, commercial and public services [ISIC Divisions 33, 36-39, 45-47, 52, 53, 55, 56, 58-66, 68-75, 77-82, 84 (excluding Class 8422), 85-88, 90-99], agriculture/forestry [ISIC Divisions 01 and 02], fishing [ISIC Division 03] and non-specified consumption.

Non-energy use *Non-energy use* covers those fuels that are used as raw materials in the different sectors and are not consumed as a fuel or transformed into another fuel. Non-energy use also includes petrochemical feedstocks. Non-energy use is shown separately in final consumption under the heading *non-energy use*.

Unit abbreviations

| | | | |
|--------------|-----------------------------------|-------------|--|
| bcm | billion cubic metres | kWh | kilowatt hour |
| Gcal | gigacalorie | MBtu | million British thermal units |
| GCV | gross calorific value | Mt | million tonnes |
| GW | gigawatt | Mtoe | million tonnes of oil equivalent |
| GWh | gigawatt hour | PPP | purchasing power parity |
| kb/cd | thousand barrels per calendar day | t | metric ton = tonne = 1 000 kg |
| kcal | kilocalorie | TJ | terajoule |
| kg | kilogramme | toe | tonne of oil equivalent = 10 ³ kcal |
| kJ | kilojoule | TWh | terawatt hour |

GEOGRAPHICAL COVERAGE

| | |
|------------------------------------|--|
| OECD* | Australia, Austria, Belgium, Canada, Chile, the Czech Republic, Denmark, Estonia, Finland, France, Germany, Greece, Hungary, Iceland, Ireland, Israel, Italy, Japan, Korea, Luxembourg, Mexico, the Netherlands, New Zealand, Norway, Poland, Portugal, the Slovak Republic, Slovenia, Spain, Sweden, Switzerland, Turkey, the United Kingdom and the United States. |
| Middle East | Bahrain, Islamic Republic of Iran, Iraq, Jordan, Kuwait, Lebanon, Oman, Qatar, Saudi Arabia, Syrian Arab Republic, United Arab Emirates and Yemen. |
| Non-OECD Europe and Eurasia | Albania, Armenia, Azerbaijan, Belarus, Bosnia and Herzegovina, Bulgaria, Croatia, Cyprus, Georgia, Gibraltar, Kazakhstan, Kosovo**, Kyrgyzstan, Latvia, Lithuania, the Former Yugoslav Republic of Macedonia, Malta, Republic of Moldova, Montenegro**, Romania, Russian Federation, Serbia**, Tajikistan, Turkmenistan, Ukraine and Uzbekistan. |
| China | People's Republic of China and Hong Kong (China). |
| Asia | Bangladesh, Brunei Darussalam, Cambodia, Chinese Taipei, India, Indonesia, Democratic People's Republic of Korea, Malaysia, Mongolia, Myanmar, Nepal, Pakistan, Philippines, Singapore, Sri Lanka, Thailand, Vietnam and Other Asia. |
| Non-OECD Americas | Argentina, Bolivia, Brazil, Colombia, Costa Rica, Cuba, Dominican Republic, Ecuador, El Salvador, Guatemala, Haiti, Honduras, Jamaica, Netherlands Antilles, Nicaragua, Panama, Paraguay, Peru, Trinidad and Tobago, Uruguay, Venezuela and Other Non-OECD Americas. |
| Africa | Algeria, Angola, Benin, Botswana, Cameroon, Congo, Democratic Republic of Congo, Côte d'Ivoire, Egypt, Eritrea, Ethiopia, Gabon, Ghana, Kenya, Libya, Morocco, Mozambique, Namibia, Nigeria, Senegal, South Africa, Sudan, United Republic of Tanzania, Togo, Tunisia, Zambia, Zimbabwe and Other Africa. |
| OECD + | OECD countries and those EU countries that are not members of the OECD (<i>i.e.</i> Bulgaria, Cyprus, Latvia, Lithuania, Malta and Romania). |
| OME (Other Major Economies) | Brazil, China, India, Indonesia, Russian Federation and Middle East. |
| OC (Other Countries) | World excluding OECD+ and OME. |

* OECD includes Estonia and Slovenia starting in 1990. Prior to 1990, data for these two countries are included in Non-OECD Europe and Eurasia.

** Serbia includes Kosovo from 1990 to 1999 and Montenegro from 1990 to 2004.

Note: The countries listed above are those for which the IEA Secretariat has direct statistics contacts. This document is without prejudice to the status of or sovereignty over any territory, to the delimitation of international frontiers and boundaries and to the name of any territory, city or area. In this publication 'country' refers to country or territory, as the case may be.

Ten Annual Publications

Energy Statistics of OECD Countries, 2012 Edition

No other publication offers such in-depth statistical coverage. It is intended for anyone involved in analytical or policy work related to energy issues. It contains data on energy supply and consumption in original units for coal, oil, natural gas, biofuels/waste and products derived from these primary fuels, as well as for electricity and heat. Complete data are available for 2009 and 2010 and supply estimates are available for the most recent year (*i.e.* 2011). Historical tables summarise data on production, trade and final consumption. Each issue includes definitions of products and flows and explanatory notes on the individual country data.

Published July 2012 - Price €120

Energy Balances of OECD Countries, 2012 Edition

A companion volume to *Energy Statistics of OECD Countries*, this publication presents standardised energy balances expressed in million tonnes of oil equivalent. Energy supply and consumption data are divided by main fuel: coal, oil, natural gas, nuclear, hydro, geothermal/solar, biofuels/waste, electricity and heat. This allows for easy comparison of the contributions each fuel makes to the economy and their interrelationships through the conversion of one fuel to another. All of this is essential for estimating total energy supply, forecasting, energy conservation, and analysing the potential for interfuel substitution. Complete data are available for 2009 and 2010 and supply estimates are available for the most recent year (*i.e.* 2011). Historical tables summarise key energy and economic indicators as well as data on production, trade and final consumption. Each issue includes definitions of products and flows and explanatory notes on the individual country data as well as conversion factors from original units to tonnes of oil equivalent.

Published July 2012 - Price €120

Energy Statistics of Non-OECD Countries, 2012 Edition

This publication offers the same in-depth statistical coverage as the homonymous publication covering OECD countries. It includes data in original units for more than 100 individual countries and nine main regions. The consistency of OECD and non-OECD countries' detailed statistics provides an accurate picture of the global energy situation for 2009 and 2010. For a description of the content, please see *Energy Statistics of OECD Countries* above.

Published August 2012 - Price €120

Energy Balances of Non-OECD Countries, 2012 Edition

A companion volume to the publication *Energy Statistics of Non-OECD Countries*, this publication presents energy balances in thousand tonnes of oil equivalent and key economic and energy indicators for more than 100 individual countries and nine main regions. It offers the same statistical coverage as the homonymous publication covering OECD countries, and thus provides an accurate picture of the global energy situation for 2009 and 2010. For a description of the content, please see *Energy Balances of OECD Countries* above.

Published August 2012 - Price €120

Electricity Information 2012

This reference document provides essential statistics on electricity and heat for each OECD member country by bringing together information on production, installed capacity, input energy mix to electricity and heat production, input fuel prices, consumption, end-user electricity prices and electricity trades.

Published August 2012 - Price €150

Coal Information 2012

This well-established publication provides detailed information on past and current evolution of the world coal market. It presents country-specific statistics for OECD member countries and selected non-OECD countries on coal production, demand, trade and prices. This publication represents a key reference tool for all those involved in the coal supply or consumption stream, as well as institutions and governments involved in market and policy analysis of the world coal market.

Published August 2012 - Price €165

Natural Gas Information 2012

A detailed reference work on gas supply and demand, covering not only the OECD countries but also the rest of the world. Contains essential information on LNG and pipeline trade, gas reserves, storage capacity and prices. The main part of the book, however, concentrates on OECD countries, showing a detailed gas supply and demand balance for each individual country and for the three OECD regions, as well as a breakdown of gas consumption by end-user. Import and export data are reported by source and destination.

Published August 2012 - Price €165

Oil Information 2012

A comprehensive reference book on current developments in oil supply and demand. The first part of this publication contains key data on world production, trade, prices and consumption of major oil product groups, with time series back to the early 1970s. The second part gives a more detailed and comprehensive picture of oil supply, demand, trade, production and consumption by end-user for each OECD country individually and for the OECD regions. Trade data are reported extensively by origin and destination.

Published August 2012 - Price €165

Renewables Information 2012

This reference document brings together in one volume essential statistics on renewables and waste energy sources. It presents a detailed and comprehensive picture of developments for renewable and waste energy sources for each of the OECD member countries, encompassing energy indicators, generating capacity, electricity and heat production from renewable and waste sources, as well as production and consumption of renewable and waste products.

Published August 2012 - Price €110

CO₂ Emissions from Fuel Combustion, 2012 Edition

In order for nations to tackle the problem of climate change, they need accurate greenhouse gas emissions data. This publication provides a basis for comparative analysis of CO₂ emissions from fossil fuel combustion, a major source of anthropogenic emissions. The data in this book are designed to assist in understanding the evolution of the emissions of CO₂ from 1971 to 2009 for more than 140 countries and regions by sector and by fuel. Emissions were calculated using IEA energy databases and the default methods and emissions factors from the *Revised 1996 IPCC Guidelines for National Greenhouse Gas Inventories*.

Published November 2012 - Price €165

Two Quarterlies

Oil, Gas, Coal and Electricity, Quarterly Statistics

This publication provides up-to-date, detailed quarterly statistics on oil, coal, natural gas and electricity for the OECD countries. Oil statistics cover production, trade, refinery intake and output, stock changes and consumption for crude oil, NGL and nine selected oil product groups. Statistics for electricity, natural gas and coal show supply and trade. Import and export data are reported by origin and destination. Moreover, oil as well as hard coal and brown coal production are reported on a worldwide basis.

Published Quarterly - Price €120, annual subscription €380

Energy Prices and Taxes

This publication responds to the needs of the energy industry and OECD governments for up-to-date information on prices and taxes in national and international energy markets. It contains crude oil import prices by crude stream, industry prices and consumer prices. The end-user prices for OECD member countries cover main petroleum products, gas, coal and electricity. Every issue includes full notes on sources and methods and a description of price mechanisms in each country. Time series availability varies with each data series.

Published Quarterly - Price €120, annual subscription €380

Electronic Editions

CD-ROMs and Online Data Services

To complement its publications, the Energy Data Centre produces CD-ROMs containing the complete databases which are used for preparing the statistics publications. State-of-the-art software allows you to access and manipulate all these data in a very user-friendly manner and includes graphic facilities. These databases are also available on the internet from our online data service.

■ Annual CD-ROMS / Online Databases

- Energy Statistics of OECD Countries, 1960-2011 Price: €550
- Energy Balances of OECD Countries, 1960-2011 Price: €550
- Energy Statistics of Non-OECD Countries, 1971-2010 Price: €550
- Energy Balances of Non-OECD Countries, 1971-2010 Price: €550
- *Combined subscription of the above four series* Price: €1 400

- Electricity Information 2012 Price: €550
- Coal Information 2012 Price: €550
- Natural Gas Information 2012 Price: €550
- Oil Information 2012 Price: €550
- Renewables Information 2012 Price: €400
- CO₂ Emissions from Fuel Combustion, 1971-2010 Price: €550

■ Quarterly CD-ROMs / Online Databases

- Energy Prices and Taxes Price: (four quarters) €900

A description of this service is available on our website:

<http://data.iea.org>

All the annual and quarterly online databases are also accessible over the internet on a pay-per-view basis. The databases can be accessed either for a single data point or for time series.

Other Online Services

The Monthly Oil Data Service

The IEA Monthly Oil Data Service provides the detailed databases of historical and projected information which is used in preparing the IEA monthly *Oil Market Report* (OMR). The IEA Monthly Oil Data Service comprises three packages available separately or combined as a subscriber service on the Internet. The data are available at the same time as the official release of the *Oil Market Report*.

The packages include:

- | | |
|---------------------------------------|---------------|
| ▪ Supply, Demand, Balances and Stocks | Price: €6 000 |
| ▪ Trade | Price: €2 000 |
| ▪ Field-by-Field Supply | Price: €3 000 |
| ▪ Complete Service | Price: €9 000 |

A description of this service is available on our website:

www.iea.org/stats/mods.asp.

The Monthly Gas Data Service

The Monthly Gas Data Service provides monthly natural gas data for OECD countries:

- supply balances in terajoules and cubic metres;
- production, trade, stock changes and levels where available, gross inland deliveries, own use and losses;
- highly detailed trade data with about 50 imports origins and exports destinations;
- LNG trade detail available from January 2002.

The databases cover the time period January 1984 to current month with a time lag of two months for the most recent data.

- Monthly Gas Data Service: Natural Gas Balances & Trade
Historical plus 12 monthly updates Price: €800

A description of this service is available on our website:

<http://data.iea.org>.

Moreover, the IEA statistics website contains key energy indicators by country, graphs on the world and OECD's energy situation evolution from 1971 to the most recent year available, as well as selected databases for demonstration.

The IEA statistics site can be accessed at:
www.iea.org/statistics/.

Note: The prices quoted for Electronic Editions are for single-user licences. Please contact us for information on multi-user licence prices.

Oil Market Report

Each month, *the primary source of data on supply, demand, stocks, prices and refining*

Since its appearance in 1983, the International Energy Agency's *Oil Market Report (OMR)* has become *the definitive source of information on world oil market fundamentals, covering supply, demand, OECD stocks, prices and refining as well as OECD and selected non-OECD trade.*

The *OMR* provides the most extensive, up-to-date statistical data available on current world oil market trends. It is the first and exclusive source to present official government statistics from all OECD countries, as well as selected data from non-OECD countries.

The main market movements of the month are highlighted in a convenient summary, while detailed analysis explains recent market developments and provides an insight into the months ahead. It is the *only regular short-term analysis of the oil industry available based on information obtained from the extensive IEA network of contacts with government and industry.*

The *OMR* provides both historical data and supply/demand forecasts for the year ahead. Featuring tables, graphs and statistics, it provides all the data and analysis necessary to track the oil market and to identify trends in production, consumption, refining, inventories in OECD countries and prices for both crude and products.

Additionally, subscribers to the *OMR* receive a copy of the annual *Medium-Term Oil Market Report (MTOMR)* which examines key industry themes. These include the impact of the global economic slowdown on oil demand, upstream and downstream investment levels, the likely pace of development of biofuels and non-conventional oil supplies, likely oil products availability and oil price formation. The *MTOMR* provides detailed supply and demand forecasts for crude oil and oil products looking five years forward, and since its inception in 2006 the report has become a standard industry reference.

€2 000

World Energy Outlook 2012

Industry and government decision-makers and others with a stake in the energy sector all need WEO-2012. It presents authoritative projections of energy trends through to 2035 and insights into what they mean for energy security, environmental sustainability and economic development.

Oil, coal, natural gas, renewables and nuclear power are all covered, including the outlook for unconventional gas, building on the recent WEO special report on the Golden Rules for a Golden Age of Gas. Global energy demand, production, trade, investment and carbon dioxide emissions are broken down by region or country, by fuel and by sector.

Special strategic analyses cover:

- the **Iraqi energy sector**, examining its role both in satisfying the country's internal needs and in meeting global oil demand;
- what **unlocking the potential for energy efficiency** could do, country by country and sector by sector, for oil security, the climate and the economy;
- the **cost of delaying action on climate change**, as more and more carbon-emitting facilities are built;
- the **water-energy nexus**, as water resources become increasingly stressed and access more contentious;
- measures of progress towards providing universal access to modern energy services; and
- recent developments in **subsidies for fossil fuels and renewable energy**.

No-one can be sure today how the future energy system might evolve; but many decisions cannot wait. The insights of WEO-2012 are invaluable to those who must make them.
