Data sources

The statistics in this publication are obtained from several sources, as follows.

- The bulk of mine production data (other than petroleum) is obtained from companies, published company reports and ABARE estimates. Data are supplemented where necessary by information from state mines departments (or their equivalents).
- Petroleum production and sales are based on data obtained from the Resources Division of the Australian Government Department of Resources, Energy and Tourism.
- Smelter and refinery production data are provided by companies operating the major smelters and refineries.
- Trade data are obtained from official ABS compiled statistics, supplemented by ABARE estimates where necessary.
- Price information is from published sources.

The assistance of the organisations supplying data is gratefully acknowledged by ABARE.

Note on mine production data

In most instances, data refer to actual mine output. However, in a small number of cases, despatches or sales data are used as proxies for production.

Quantities of minerals produced are reported in terms of the product in which they leave each mine site. This includes various stages of ore dressing, processing and elementary smelting where these are carried out in an associated plant at, or near, the mine. The output is recorded as ore where no treatment is undertaken at the mine, or as a concentrate where ore dressing operations are carried out.

Definitions

Definitions and explanations

Small discrepancies in totals are generally because of the rounding of components.

zero is used to denote nil or a negligible amount

p denotes a preliminary figure

s denotes an ABARE estimate

Australian merchandise exports: are valued on a free on board (fob) basis at the Australian port of export. The costs of freight, insurance and other distributive services beyond the Australian customs border are not included.

Australian merchandise imports: are valued on a customs value for duty (vfd) basis that is identical to a free on board (fob) basis. The customs vfd is the price actually paid at the port of origin, including inland freight and insurance costs incurred in delivering the commodity to the port of origin. The freight and insurance costs of delivering the commodity(s) to the Australian port of destination are excluded.

Accounting of international merchandise trade: the valuation of Australian merchandise exports and imports used in the accounting of international trade in the Australian Balance of Payments and the international trade statistical system are in accordance with the definitions published in the harmonised international standards determined by the International Monetary Fund, *Balance of Payments Manual* (version 5), 1993 and the United Nations, *System of National Accounts*, 1993.

Overview

- The index of export prices of energy and mineral resources increased by 7 per cent in the March quarter 2010 reflecting higher commodity prices, including for oil, metallurgical coal, thermal coal and the majority of metals. However, in the March quarter 2010, Australia's mineral resource export earnings declined by 3 per cent to \$30.2 billion, reflecting lower export volumes.
- Export volumes decreased for the majority of commodities including zinc, copper, aluminium, thermal coal, metallurgical coal and iron ore, which was largely as a result of lower production.
- In total, Australian production of mineral commodities declined during the quarter with only 30 per cent of commodities recording increases in production.
- Several factors contributed to the decline in production across a wide range of commodities. These include supply disruptions because of weather events and equipment failure.

Prices

In the March quarter 2010, the index of export prices for Australia's energy and mineral resources (export unit returns) increased by 7 per cent compared with the December quarter 2009. Export unit returns for energy minerals increased by 7 per cent, reflecting higher prices for crude oil and higher export unit values for thermal and metallurgical coal. The index of metals and other minerals prices also increased by 7 per cent, as a result of increases in the US dollar price for many base metals, gold and iron ore.

Compared with the March quarter 2009, the index of export unit returns was 27 per cent lower, as prices for energy minerals declined by 38 per cent and prices for metals and other minerals declined by 16 per cent. Lower export unit prices primarily reflected large declines in the contract prices for bulk commodities for the Japanese Fiscal Year 2009 (JFY, April 2009 to March 2010), and a 36 per cent appreciation of the Australian dollar against the US dollar.

Exports

Earnings from energy and mineral resource exports declined by 3 per cent to \$30.2 billion in the March quarter 2010 compared with the December quarter 2009. This increase reflects declines in the volume of exports for many commodities, which more than offset higher prices for many commodities during the quarter.

Commodities recording significant declines in export earnings in the March quarter 2010 included: uranium oxide, down \$51 million (28 per cent) to \$131 million; zircon concentrate, down \$23 million (24 per cent) to \$74 million; crude oil and other refinery feedstock, down \$348 million (15 per cent) to \$2 billion; lead, down \$60 million (13 per cent) to \$403 million; copper, down \$184 million (11 per cent) to \$1.5 billion; thermal coal, down \$378 million (10 per cent) to \$2.6 billion; and metallurgical coal, down \$388 million (7 per cent) to \$5 billion.

Lower export values for zircon concentrate reflects both lower export volumes and export unit values. Export values for uranium oxide, lead, crude oil and other refinery feedstock, copper,

a Prices in US dollars. All other prices are export unit values denominated in Australian dollars.

thermal coal and metallurgical coal declined during the quarter because of lower export volumes, while export unit values recorded modest increases.

Commodities recording significant increases in export earnings in the March quarter included: gems other than diamonds, up \$6 million (86 per cent) to \$13 million; ilmenite concentrate, up \$13 million (27 per cent) to \$61 million; tin, up \$5 million (24 per cent) to \$26 million; iron and steel, up \$60 million (27 per cent) to \$285 million; and manganese ore and concentrates, up \$74 million (23 per cent) to \$391 million.

Increased export values for gems other than diamonds were underpinned by higher values for opal exports. The export values for ilmenite concentrate, tin, and iron and steel increased in the quarter as higher export volumes more than compensated for declines in export unit values. The export value of manganese ore and concentrates increased as a sharp rise in the export unit value reinforced the effect of higher export volumes.

Production

Production declined in the March quarter 2010 compared with the December quarter 2009, with only 30 per cent of commodities recording increases in the quarter. Significant production declines occurred for uranium oxide (U_3O_8) (30 per cent); refined copper (30 per cent); diamonds (28 per cent); refined nickel class 1 (21 per cent); and refined silver (15 per cent).

Production of uranium oxide and refined copper declined in the quarter, primarily reflecting continued interruptions at BHP Billiton's Olympic Dam operation in South Australia. Lower production of diamonds for the quarter was primarily a reflection of lower production at Rio Tinto's Argyle diamond mine in Western Australia. A decline in production of refined class 1 and intermediate nickel reflects lower output from Nickel West's Kwinana refinery, Queensland Nickel's Yabulu operation and Minara Resources' Murrin Murrin operation in Western Australia.

In contrast, increased production was observed for refined nickel class 2 (76 per cent); mined zinc (23 per cent); manganese (19 per cent); zircon concentrate (16 per cent); and synthetic rutile (9 per cent).

Production of class 2 refined nickel was higher in the March quarter, as a result of higher production from Queensland Nickel's Yabulu refinery. Mined zinc production was higher in the quarter, reflecting the resumption of normal operations at the Century zinc mine in Queensland. Production of zircon concentrate and synthetic rutile increased, predominantly from higher production at Iluka's Victorian and Western Australian operations. Higher manganese production for the quarter was underpinned by production increases from Western Australian operations.

Commodity highlights

Energy

Oil and Gas

Crude oil and condensate production during the March quarter 2010 declined by 6 per cent to 6322 megalitres compared with the December 2009 quarter. The fall in production was mainly as a result of flooding in South Australia, which affected the Cooper basin. Production from the Cooper basin was around 30 per cent lower compared with the December quarter. The flooding has resulted in more than 2 million barrels of production being deferred, with production also expected to be affected in the June quarter.

Natural gas production during the quarter remained steady at around 11 billion cubic metres.

As a result of the decline in production, crude oil and condensate export volumes fell by 18 per cent to 3788 million litres over the March quarter. Despite slightly higher crude oil prices, the value of crude oil and condensate exports fell by 15 per cent to \$2 billion.

LNG exports increased by 21 per cent to \$2.2 billion, supported by higher export prices.

Coal

Production of salable black coal is estimated to have fallen by 10 per cent in the March quarter, as coal production in Queensland was affected by severe weather associated with Cyclone Ului. Reflecting lower production of black coal, export volumes of both thermal and metallurgical coal declined in the quarter. Exports of metallurgical coal decreased by 10 per cent to 35.4 million tonnes, while thermal coal exports fell by 13 per cent to 30.8 million tonnes.

In the March quarter 2010, export unit returns for metallurgical and thermal coal increased by 3 per cent and 4 per cent, respectively, compared with the December quarter 2009. In the March quarter, lower export volumes more than offset a slight increase in export prices, with the value of black coal exports declining by 8 per cent to \$7.6 billion.

Uranium

Uranium production declined by 30 per cent in the March quarter. This was because of lower production from BHP Billiton's Olympic Dam, where a failure of the main haulage shaft caused production disruptions, and the lower grade ore processed at Energy Resources of Australia's Ranger operation. The value of uranium exports declined by 28 per cent to \$131 million in the March quarter associated with lower export volumes.

Metals and other minerals

Iron ore

In the March quarter 2010, Australian production of iron ore was 4 per cent lower than the December quarter 2009. This was partially attributable to modest declines in Rio Tinto's production, which was restricted by the availability of certain items of production equipment. In addition, BHP Billiton's production was negatively affected by weather related disruptions

and activities associated with the recently completed Rapid Growth Project 4. Reflecting lower production, export volumes declined by 4 per cent. Higher prices for iron ore sold on the spot market more than offset a decline in export volumes. As a result, export values increased by 3 per cent to \$7 billion.

Gold

Gold mine production remained unchanged at 60 tonnes in the March quarter 2010 compared with the December quarter 2009. Increases in production from projects including Newmont's Boddington redevelopment and the Kalgoorlie Joint Venture Super Pit were offset by decreased production from projects including Newcrest's Telfer mine and Barrick Gold's Yilgarn South operations. Refined gold production fell by 11 per cent to 77 tonnes as less refined gold was produced from overseas sourced scrap and recycled jewellery. Export volumes were unchanged at 81 tonnes. A rise in the US dollar denominated gold price led to a 1 per cent rise in unit export returns. This rise in unit export returns supported a 1 per cent increase in export earnings to \$3.1 billion in the March quarter 2010.

Copper

In the March quarter 2010, copper mine production fell by 10 per cent compared with the previous quarter, while production of refined copper fell by 30 per cent. This was largely as a result of reduced production at BHP Billiton's Olympic Dam operation, where a failure of the main haulage shaft significantly affected production of both mined and refined copper. The value of copper exports declined by 11 per cent to \$1.5 billion in the quarter, as lower export volumes offset higher export prices.

Nickel

Nickel mine production declined by 7 per cent in the March quarter to 38 000 tonnes. Decreased production from BHP Billiton's Nickel West, Xstrata's Cosmos operations and Independence Group's Long Nickel Mine was partly offset by increased production at Panoramic Resources' operations and new production from Western Area's Spotted Quoll operation. Refined nickel production decreased by 17 per cent in the quarter as a result of disruptions to production at BHP Billiton's Nickel West Kwinana refinery in March. Nickel export volumes decreased by 16 per cent in the March quarter as a result of the decrease in refined production. Export earnings from nickel remained steady at around \$976 million, as higher export prices were offset by lower production.

Zinc

Zinc mine production increased by 23 per cent to around 336 000 tonnes in the March quarter 2010 compared with the December quarter 2009. This mainly reflects the resumption of normal production at the Century zinc mine in Queensland. Production at Century was adversely affected after the suspension of the concentrator in the December quarter 2009. The value of zinc exports declined by 2 per cent to \$533 million in the March quarter 2010, in line with lower export volumes.

a Commercial sales plus field and plant usage. b This is a minimum level and includes only direct sales by the oil industry. The data do not include volumes sold to distributors etc. which are subsequently used or sold for automotive use. c Includes automotive diesel oil and industrial and marine diesel fuel.

p Preliminary. s ABARE estimate.

18 Petroleum production, by basin

Table 18 habitually contains production statistics for crude oil, condensate, LPG, ethane and natural gas by basin on a quarterly and annual basis. Data for this table is sourced from the Australian Petroleum Statistics, which is produced by the Department of Resources, Energy and Tourism.

The Department of Resources, Energy and Tourism and ABARE are currently conducting a review of the Australian Petroleum Statistics. The purpose of the review is to identify ways of improving the quality of Australia's petroleum data and the management of petroleum data collection.

It is intended that table 18 will be updated in the next Australian Mineral Statistics publication, to be released in September 2010.
